

Danilo Pantani

Blockchain Developer

Crypto Infrastructure · Go Backend · Distributed Systems

São Paulo, Brazil · Brazilian & Italian citizen · UTC-3 · Remote

danpantani@gmail.com · github.com/Pantani · linkedin.com/in/dpantani · pantani.github.io · t.me/dpantani

PROFESSIONAL SUMMARY

Blockchain developer with 10+ years in software engineering, focused on crypto infrastructure, Go backend services and distributed systems.

Led backend work on Trust Wallet's multi-chain blockatlas, built Cosmos developer tooling at Ignite and implemented AtomOne distribution-module changes. Current independent work includes Rust tooling for Solana and Stellar development.

TECHNICAL SKILLS & CORE EXPERTISE

Blockchain & Protocol Engineering: Cosmos SDK, CometBFT, Tendermint, IBC, validator infrastructure, AtomOne, Gno, Ethereum, EVM, Bitcoin / UTXO, zk-SNARKs, Layer 2, rollup infrastructure.

Go Backend & Distributed Systems: Go (Golang), gRPC, REST APIs, distributed systems, concurrency, PostgreSQL.

Platform Engineering, Cloud & DevOps: Kubernetes, Docker, Helm, Terraform, AWS, GCP, GitHub Actions, CI/CD, Prometheus, Grafana.

PROFESSIONAL EXPERIENCE

Danilo Pantani

Blockchain Developer & Go Backend Engineer

Apr 2026 — Present
Self-employed · Remote

- Develop Rust CLI projects, including Sunscreen for Solana scaffolding and stellar-forge for Stellar workspaces.
- Take on occasional backend and Go assignments for external clients.
- Build tdmcp and Ableton Mind: developer integrations for creative applications using TypeScript and Python.

Ignite

Blockchain Engineer, Go — Developer Platform & Distributed Systems

Dec 2022 — Mar 2026
Remote

- Replaced import and keeper-initialization placeholders with AST-based transformations in Ignite CLI; worked on protobuf analysis, generated code and comment handling.
- Implemented AtomOne distribution-module changes for ADR-004 Nakamoto Bonus and contributed epoch-timing, governance-migration and validator-commission changes.
- Worked on validator infrastructure and consumer-chain lifecycle tooling, alongside code review and CI maintenance.
- Contributed upstream fixes for Cosmos SDK AutoCLI protobuf resolution and an IBC-Go helper for checking existing capability scopes.

Interchain Foundation

Blockchain Engineer, Go — Cosmos Hub & Interoperability

Jun 2022 — Dec 2022
Remote

- Contributed to Gaia, the Cosmos Hub application, with the Interchain Foundation core team. Added end-to-end tests for vesting accounts, delegation and transfers.
- Added protocol-module test coverage and contributed fixes to application configuration, genesis export and CI.

Ignite

Senior Blockchain Engineer, Go

Jun 2021 — Jun 2022
Remote

- I joined **Ignite CLI** as a core engineer in 2021, working on scaffolding, protobuf analysis, generated code, and the CLI flows used to build and maintain Cosmos SDK chains.

Hermez Network

Blockchain / Layer-2 Engineer, Go

Feb 2021 — Jun 2021
Remote

- At **Hermez**, I wrote Go services for the backend and protocol-facing parts of its Ethereum Layer-2 operator stack.
- Those services connected Ethereum tooling with the zk-SNARK prover and coordinator pipeline.

Energi

Backend Engineer / Architecture

Apr 2020 — Feb 2021
Remote

- At Energi, I built Go services for the **DeFi stack** and custodial-wallet flows, including systems that handled private-key custody.
- I also designed the Kubernetes and Helm deployment setup and its **GitHub Actions** delivery pipeline.
- **Prometheus and Grafana** covered monitoring for services and blockchain nodes in production.

Trust Wallet / Binance

Aug 2019 — Apr 2020

Backend Lead, Go

Remote

- Led backend work on blockatlas, Trust Wallet's multi-chain backend, including chain integrations, transaction parsing and indexing workflows.
- Contributed to the Node.js-to-Go migration and standardized worker pools, fan-out processing, batching and context cancellation.
- Added HTTP metrics and a Prometheus metrics endpoint; operated and monitored full nodes supporting the multi-chain backend.

Mercado Bitcoin

Mar 2018 — Aug 2019

Tech Lead — Backend & Mobile

São Paulo

- At Mercado Bitcoin, I built Go and Python services for multi-chain transaction tracking and payload signing.
- The role also included hot, warm, and cold wallet scripts tied to the exchange ledger and matching systems.
- Led a seven-person mobile team and coordinated delivery across backend, iOS, Android and web engineering.

Earlier Roles

2011 — 2018

Staff Engineer / Founder / Full-Stack & Mobile Engineer

São Paulo

XP Inc. (XDEX) - Staff Engineer · Dec 2017 - Mar 2018: led the development team, technical decisions, and .NET exchange services.

Finchain / FlowBTC - Full-Stack Developer · Sep - Nov 2017: native mobile apps, ERC-20 wallets, DApp and ICO smart contracts, and exchange reconciliation.

Neon Bank - Mobile Developer · Jan - Nov 2017: native iOS and Android work plus OpenCV/C++ document capture.

Miya - Co-Founder / CTO · Jan 2016 - Jan 2017: real-time people-management platform using Wi-Fi signals.

Pixon - Co-Founder / CTO · Jan 2014 - Jan 2017: led native mobile, automation, beacon, and Wi-Fi micro-location products.

Ice Juice Lemon - Mobile Developer / Team Lead · Jun 2013 - Jan 2014: led the mobile team and built native iOS and Android apps.

IAI - Mobile Developer / Instructor · Jul 2012 - Jun 2013: built native iOS and Android apps and delivered mobile-development training.

Brandish Ad - iOS Developer · Nov 2011 - Jul 2012: built native iOS applications.

SELECTED REPOSITORIES / EVIDENCE

ignite/cli · ignite/network · tendermint/spn · atomone-hub/atomone · atomone-hub/atomone-sdk · cosmos/cosmos-sdk · cosmos/ibc-go · cosmos/gaia · allinbits/vaas · hermeznetwork/hermez-node · trustwallet/blockatlas

TEACHING & TALKS

FIAP · 2021–2022 — MBA instructor in decentralized application development and Ethereum smart contracts.

Go Blockchain · 2018–2019 — Instructor in Ethereum blockchain development and smart contracts for mobile.

Selected talks — Web3Family 2023, Barcelona — building Cosmos SDK chains and tooling with Ignite.

AwesomWasm 2023, Berlin — Ignite stack workshop.

ETH São Paulo 2021 — zk-SNARKs and Ethereum Layer 2.

LANGUAGES

Portuguese (Native) · English (Advanced) · Spanish (Advanced)

EDUCATION & CERTIFICATIONS

Education

Universidade Presbiteriana Mackenzie

Computer Science: six semesters completed. Electrical Engineering: eight semesters completed. Neither degree completed. São Paulo, Brazil.

Certifications

Data Science (2021) - Let's Code Academy · 48h

Programming Blockchain (2018) - Jimmy Song · 16h

Ethereum Blockchain Developer (2017) - Go Blockchain · 16h

Smart Contracts in Ethereum Blockchain (2017) - FIAP · 8h

Blockchain Development (2017) - Finchain / Blockchain Brazil · 16h
