

Available for Senior Go, Backend & Distributed Systems roles • Remote • UTC-3 • EU work-eligible

Danilo Pantani

Senior *Go Engineer*

Backend • Distributed Systems • Platform Engineering • Blockchain Infrastructure

I began my software engineering career in São Paulo in 2011.

Since then, my work has moved through financial platforms, Go backends, and blockchain infrastructure. At Ignite, I focused on the CLI, Cosmos SDK, IBC, AtomOne, and validator tooling.

10⁺

years in software engineering across backend, financial, platform & blockchain systems

300⁺

public merged PRs in Ignite CLI

200⁺

public merged PRs in Trust Wallet blockatlas

1,100⁺

public merged PRs across open source (Cosmos, Ethereum & wallet backends)

01 Core Expertise

Most of my work is in backend and protocol engineering. I also handle deployment, observability, and frontend work when a project needs it.

Blockchain & Protocol Engineering

Cosmos SDK, CometBFT, Tendermint, IBC, validator infrastructure, AtomOne, Gno, Ethereum, EVM, Bitcoin / UTXO, zk-SNARKs, Layer 2, rollup infrastructure.

Go Backend & Distributed Systems

Go, gRPC, REST APIs, backend architecture, concurrency, goroutines, worker pools, context cancellation, distributed systems, Validator-as-a-Service workflows, consumer-chain lifecycle, misbehaviour validation, and validator-commission updates.

Developer Tooling

Cobra, Viper, protobuf analysis, AST-based code generation, scaffolding, migrations, CLI design, and release tooling.

Infrastructure & DevOps

Docker, Kubernetes, Terraform, Pulumi, Ansible, Helm Charts, AWS, GCP, cloud deployments, GitHub Actions, CI/CD, Prometheus, Grafana, multi-chain Cosmos full-node operations, observability, and production operations.

Full-Stack Delivery

JavaScript, TypeScript, React, responsive UI, component architecture, and full-stack delivery from API to interface.

Engineering Workflow

Repository context, code review, refactoring, and MCP tooling for TouchDesigner through tdmcp.

02 Selected Protocol Impact

A few examples of protocol and backend work, with links to the public repositories.

AtomOne

Protocol + implementation

CONTRIBUTION

Implemented ADR-004 Nakamoto Bonus distribution-module behavior.

SCOPE

Later work covered governance migrations and validator-commission updates in the AtomOne SDK fork.

[atomone](#) > [atomone-sdk](#)

Ignite CLI

300+ PRs

CONTRIBUTION

Worked on protobuf analysis, AST-based generation, and scaffold migrations.

SCOPE

More than 300 merged PRs across the CLI and its developer workflows.

Merged PRs > [ignite/cli](#)

Cosmos SDK • IBC-Go

Upstream

CONTRIBUTION

Added interface-registry and gogoproto handling plus a capability-keeper helper.

SCOPE

Small upstream changes used by downstream Cosmos SDK modules.

[cosmos-sdk](#) > [ibc-go](#)

Trust Wallet blockatlas

200+ PRs

CONTRIBUTION

Led backend work for multi-chain indexing, integrations, and full-node tooling.

SCOPE

More than 200 merged PRs, including work on the Node.js-to-Go migration.

Merged PRs > [blockatlas](#)

Protobuf	gRPC	Docker	Kubernetes	
Terraform	GitHub Actions	CI/CD		

03 Professional Experience

All in Bits (Ignite)

Dec 2022 – Mar 2026

Remote

Blockchain Engineer, Go · Cosmos SDK · IBC

- On **Ignite CLI**, I worked on protobuf analysis, AST-based code generation, scaffold migrations, and CLI behavior. More than **300 of my public pull requests** were merged.
- The same role also covered **IBC, validator infrastructure, consumer-chain lifecycle work, misbehaviour validation**, parameter cleanup, and Validator-as-a-Service.
- I contributed smaller upstream fixes to **Cosmos SDK and IBC-Go**, including gogoproto registry resolution and a capability-keeper helper.

Interchain Foundation

Jun 2022 – Dec 2022

Remote

Blockchain Engineer, Go

- During a six-month engagement with the Interchain Foundation core team, I contributed to **Gaia** and nearby Cosmos SDK modules for the Cosmos Hub.
- The work included module composition, IBC functionality for downstream chains, and a capability-keeper improvement in IBC-Go.

All in Bits (Ignite)

Jun 2021 – Jun 2022

Remote

Senior Blockchain Engineer, Go

- I joined **Ignite CLI** as a core engineer in 2021, working on scaffolding, protobuf analysis, generated code, and the CLI flows used to build and maintain Cosmos SDK chains.

Hermez Network

Feb 2021 – Jun 2021

Remote

Blockchain / Layer-2 Engineer, Go

- At **Hermez**, I wrote Go services for the backend and protocol-facing parts of its Ethereum Layer-2 operator stack.
- Those services connected Ethereum tooling with the zk-SNARK prover and coordinator pipeline.

Energi

Apr 2020 – Feb 2021

Remote

Backend Engineer / Architecture

- At Energi, I built Go services for the **DeFi stack** and custodial-wallet flows, including systems that handled private-key custody.
- I also designed the Kubernetes and Helm deployment setup and its **GitHub Actions** delivery pipeline.
- Prometheus and Grafana** covered monitoring for services and blockchain nodes in production.

Trust Wallet / Binance

Aug 2019 – Apr 2020

Remote

Backend Lead, Go

- At Trust Wallet, I led backend work on **blockatlas**. More than **200 of my public pull requests** were merged across chain integrations, indexers, market-data routes, and full-node tooling.
- As services moved from Node.js to Go, I standardized worker pools, fan-out processing, batching, and context cancellation.
- I also operated and monitored full nodes for the wallet's multi-chain backend.

Mercado Bitcoin

Mar 2018 – Aug 2019

São Paulo

Tech Lead — Backend & Mobile

- At Mercado Bitcoin, I built Go and Python services for multi-chain transaction tracking and payload signing.
- The role also included hot, warm, and cold wallet scripts tied to the exchange ledger and matching systems.
- I led backend and mobile delivery across iOS, Android, and web.

Earlier Roles

2011 – 2018

São Paulo

Tech Lead / Founder / Mobile Engineer

XDEX: .NET exchange services. **Finchain / FlowBTC**: ERC-20 wallets, smart-contract integrations, and compliance systems. **Neon Bank**: iOS / Android applications and document-recognition flows.

Highlights

- Ignite CLI**: 300+ public merged PRs. The work included protobuf analysis, AST-based code generation, scaffold migrations, and CLI behavior.
- AtomOne**: Cosmos SDK fork work — distribution module, ADR-004 Nakamoto Bonus, governance migrations.
- Hermez**: Go backend for Ethereum L2 zk-SNARK rollup operator workflows.
- ignite/network · spn**: Cosmos chain-launch coordination & sovereign-chain lifecycle workflows.
- Cosmos SDK + IBC-Go**: upstream interface-registry handling and capability-keeper helpers.
- Trust Wallet blockatlas**: 200+ public merged PRs across multi-chain indexing & full-node tooling.

Teaching & Talks

FIAP · 2021

MBA instructor in decentralized application development and Ethereum smart contracts.

Go Blockchain · 2018

Instructor in Ethereum blockchain development and smart contracts for mobile.

Selected talks

Web3Family 2023, Barcelona — building Cosmos SDK chains and tooling with Ignite.
AwesomWasm 2023, Berlin — Ignite stack workshop.
ETH São Paulo 2021 — zk-SNARKs and Ethereum Layer 2.

Education & Certifications

Education

Universidade Presbiteriana Mackenzie

Coursework toward Computer Science (6 semesters) and Electrical Engineering (8 semesters). São Paulo, Brazil.

Certifications

Programming Blockchain (2018) — Jimmy Song · 16h
Data Science (2021) — Let's Code Academy · 48h
