PROFESSIONAL SUMMARY

Golang and full-stack engineer and hands-on technical lead with 10+ years across Web3 and blockchain, production Go backend platforms, distributed systems, and fintech and digital-asset infrastructure.

Core strengths: Go, system design, gRPC and REST APIs, concurrent processing, Kubernetes, CI/CD, observability, developer tooling, and technical leadership. Evidence includes 326 merged Ignite CLI PRs, 248 Trust Wallet blockatlas PRs, and AtomOne ADR-004 implementation.

TECHNICAL SKILLS & CORE EXPERTISE

Go Backend & Distributed Systems: Go (Golang), backend engineering, distributed systems, software architecture, system design, gRPC, REST APIs, concurrent processing, goroutines, worker pools, fan-out processing, batching, and context cancellation.

Platform Engineering, Cloud & DevOps: Kubernetes, Docker, Helm, Terraform, Pulumi, Ansible, AWS, GCP, GitHub Actions, CI/CD, Prometheus, Grafana, observability, cloud deployments, and production operations.

Developer Tooling: Cobra, Viper, protobuf analysis, AST-based code generation, scaffolding, migrations, CLI design, and release tooling.

Blockchain & Protocol Engineering: Cosmos SDK, CometBFT, Tendermint, IBC, validator infrastructure, AtomOne, Gno, Ethereum, EVM, Bitcoin / UTXO, zk-SNARKs, Layer 2, rollup infrastructure.

Technical Leadership & Engineering Workflow: Hands-on team leadership, system design, technical decisions, code review, and cross-functional delivery across backend, mobile, and product engineering; repository-context, refactoring, and MCP tooling with tdmcp.

Full-Stack, Mobile & IoT: JavaScript, TypeScript, React; native iOS and Android with Objective-C, Swift, Java, and Kotlin; OpenCV/C++, beacons, Wi-Fi, Arduino, and Raspberry Pi.

PROFESSIONAL EXPERIENCE

Independent

Apr 2026 — Present

Independent Software Engineer

Remote

- Freelance backend and Go engagements for external clients, alongside open-source developer tooling.
- Author of **tdmcp** (MCP server for TouchDesigner) and **Ableton Mind** (MCP server for Ableton Live), built in Go and TypeScript.
- Built **sunscreen** (Solana CLI scaffolding) and **stellar-forge** (Stellar workspace CLI) in **Rust**, plus the **SEDUX** project set.

Ignite (All in Bits)

Dec 2022 — Mar 2026

Blockchain Engineer, Go — Developer Platform & Distributed Systems

Remote

- On **Ignite CLI**, I worked on protobuf analysis, AST-based code generation, scaffold migrations, and CLI behavior. **326 pull requests** were merged into Ignite CLI and **73** into its application framework.
- Shipped protocol and module work for **AtomOne / Cosmos SDK fork** efforts, including distribution-module implementation, ADR-004 Nakamoto Bonus mechanics, governance-migration fixes, and validator-commission update logic — **26 merged pull requests** across the AtomOne repositories.
- The same role also covered **IBC, validator infrastructure, consumer-chain lifecycle work, misbehaviour validation**, parameter cleanup, and Validator-as-a-Service.
- Extended **Gno / allinbits/gno-realms** with IBC core and transfer-realm functionality, including MsgCall helpers and restrictions on relayed IBC operations.
- I contributed smaller upstream fixes to **Cosmos SDK and IBC-Go**, including gogoproto registry resolution and a capability-keeper helper.
- The role also included nested RPC messages, custom typed arrays, daemon behavior, CI failures, and Sentry noise. I used **Claude Code** and **Codex** during review and refactoring, with the resulting code and tests checked before merge.

Interchain Foundation

Jun 2022 — Dec 2022

Blockchain Engineer, Go — Cosmos Hub & Interoperability

Remote

- During a six-month engagement with the Interchain Foundation core team, I contributed to **Gaia** and nearby Cosmos SDK modules for the Cosmos Hub.
- The work included module composition, IBC functionality for downstream chains, and a capability-keeper improvement in IBC-Go.

Ignite (formerly Tendermint)

Jun 2021 — Jun 2022

Senior Blockchain Engineer, Go — Developer Tooling

Remote

- I joined **Ignite CLI** as a core engineer in 2021, working on scaffolding, protobuf analysis, generated code, and the CLI flows used to build and maintain Cosmos SDK chains.

Hermez Network

Feb 2021 — Jun 2021

Blockchain / Layer-2 Engineer, Go

Remote

- At **Hermez**, I wrote Go services for the backend and protocol-facing parts of its Ethereum Layer-2 operator stack.
- Those services connected Ethereum tooling with the zk-SNARK prover and coordinator pipeline.

Energi Core

Apr 2020 — Feb 2021

Backend Engineer / Architecture — Go, Kubernetes & Observability

Remote

- At Energi, I built Go services for the **DeFi stack** and custodial-wallet flows, including systems that handled private-key custody and event-driven processing over **Kafka, RabbitMQ, and NATS**.
- I also designed the Kubernetes and Helm deployment setup on **AWS and GCP**, the **Terraform** infrastructure definitions, and its **GitHub Actions** delivery pipeline.
- **Prometheus and Grafana** covered monitoring for services and blockchain nodes in production.

Binance · Trust Wallet

Aug 2019 — Apr 2020

Backend Lead, Go — Trust Wallet

Remote

- At Trust Wallet, I led backend work on **blockatlas**. **248 pull requests** were merged across chain integrations, indexers, market-data routes, and full-node tooling.
- As services moved from Node.js to Go, I standardized worker pools, fan-out processing, batching, and context cancellation.
- I also operated and monitored full nodes for the wallet's multi-chain backend, with event-driven processing over **Kafka, RabbitMQ, and NATS**.
- Built and maintained blockchain data routes, asset metadata flows, transaction parsing, validator logic, RPC batching, and chain-specific integration logic.

Mercado Bitcoin

Mar 2018 — Aug 2019

Tech Lead — Backend & Mobile

São Paulo

- At Mercado Bitcoin, I built Go and Python services for multi-chain transaction tracking and payload signing, using event-driven processing over **Kafka, RabbitMQ, and NATS**.
- The role also included hot, warm, and cold wallet scripts tied to the exchange ledger and matching systems. Exchange infrastructure ran on **AWS and GCP**, managed as code with **Terraform**.
- I led a **7-person mobile team** and coordinated customer-facing engineering across backend, iOS, Android, and web.

Earlier Roles

2011 — 2018

Staff Engineer / Co-Founder & CTO / Full-Stack & Mobile Engineer

São Paulo

XP Inc. - Staff Engineer · Dec 2017 - Mar 2018: led a 15-person engineering team on the group's digital-asset exchange (XDEX) and its structured credit product; .NET exchange services on Microsoft Azure.

Finchain (Fintech Venture Builder) - Full-Stack Developer · Sep - Nov 2017: native mobile apps, ERC-20 wallets, DApp and ICO smart contracts, and exchange reconciliation.

Neon Bank - Mobile Developer · Jan - Nov 2017: native iOS and Android work plus OpenCV/C++ document capture.

Miya Solutions - Co-Founder / CTO · Jan 2016 - Jan 2017: real-time people-management platform using Wi-Fi signals.

Pixon - Co-Founder / CTO · Jan 2014 - Jan 2017: led native mobile, automation, beacon, and Wi-Fi micro-location products.

Ice Juice Lemon - Mobile Developer / Team Lead · Jun 2013 - Jan 2014: led the mobile team and built native iOS and Android apps.

IAI - Mobile Developer / Instructor · Jul 2012 - Jun 2013: built native iOS and Android apps and delivered mobile-development training.

Brandish Ad - iOS Developer · Nov 2011 - Jul 2012: built native iOS applications.

SELECTED REPOSITORIES / EVIDENCE

ignite/cli · ignite/network · tendermint/spn · atomone-hub/atomone · atomone-hub/atomone-sdk · cosmos/cosmos-sdk · cosmos/ibc-go · cosmos/gaia · allinbits/vaas · hermeznetwork/hermez-node · trustwallet/blockatlas

TEACHING & TALKS

FIAP · 2021—2022 — MBA instructor in decentralized application development and Ethereum smart contracts.

Let's Code · 2016—2019 — Instructor at Let's Code Academy, teaching programming fundamentals and Java to students moving into software engineering.

Go Blockchain · 2018—2019 — Instructor in Ethereum blockchain development and smart contracts for mobile.

Selected talks — Web3Family 2023, Barcelona — building Cosmos SDK chains and tooling with Ignite.

AwesomWasm 2023, Berlin — Ignite stack workshop.

ETH São Paulo 2021 — zk-SNARKs and Ethereum Layer 2.

LANGUAGES

Portuguese (Native) · English (Advanced) · Spanish (Advanced)

EDUCATION & CERTIFICATIONS

Education

Universidade Presbiteriana Mackenzie

Coursework toward Computer Science (6 semesters) and Electrical Engineering (8 semesters). São Paulo, Brazil.

Certifications

Data Science (2021) - Let's Code Academy · 48h

Programming Blockchain (2018) - Jimmy Song · 16h

Ethereum Blockchain Developer (2017) - Go Blockchain · 16h

Smart Contracts in Ethereum Blockchain (2017) - FIAP · 8h

Blockchain Development (2017) - Finchain / Blockchain Brazil · 16h
