Danilo Pantani

Senior Backend Engineer

Go (Golang) · Distributed Systems · Blockchain Infrastructure

São Paulo, Brazil · Brazilian & Italian citizen · UTC–3 · Remote
danpantani@gmail.com · github.com/Pantani · linkedin.com/in/dpantani · pantani.xyz · t.me/dpantani

PROFESSIONAL SUMMARY

Senior backend engineer with 10+ years in software engineering, focused on Go services, distributed systems and blockchain infrastructure.

Led backend work on Trust Wallet's multi-chain blockatlas, built Cosmos developer tooling at Ignite and implemented AtomOne distribution-module changes. Independent work includes Go client engagements and personal projects.

TECHNICAL SKILLS & CORE EXPERTISE

Go Backend & Distributed Systems: Go (Golang), distributed systems, HTTP APIs, worker pools, fan-out, batching, context cancellation.

Platform Engineering, Cloud & DevOps: Kubernetes, Docker, Helm, Terraform, AWS, GCP, GitHub Actions, CI/CD, Prometheus, Grafana.

Developer Tooling: Protocol Buffers, AST transformations, code generation, scaffolding, CLI and SDK tooling.

Blockchain & Protocol Engineering: Cosmos SDK, CometBFT, IBC, TypeScript relayers, AtomOne, Ethereum / EVM, Bitcoin / UTXO, zk-SNARKs, Layer 2.

PROFESSIONAL EXPERIENCE

Danilo Pantani — May 2026 — Present
Go Backend Engineer & Blockchain Developer — Self-employed · Remote

- Take on occasional backend and Go assignments for external clients.

All in Bits (Ignite) — Jun 2021 — May 2026
Blockchain Engineer, Go — Developer Platform & Distributed Systems — Remote

- Built Ignite CLI tooling in Go: AST transformations, Protobuf generation, module scaffolding and SDK migrations; contributed upstream Cosmos SDK and IBC-Go fixes.
- Implemented Hermes, CosmWasm and fee-abstraction integrations, plus Spaceship chain deployment over SSH/SFTP with process control and logs.
- Implemented AtomOne Nakamoto Bonus distribution, epoch-based execution, validator commission rules and governance migration fixes.
- Implemented VaaS fee pools, validator payments, debt-state propagation and transaction admission rules; added misbehaviour validation and IBC v2 fixes.
- Extended Gno Realms IBC transfers with memos, GRC20 voucher helpers, relay authorization and query views.
- Implemented SPN modules in Go for validator profiles, chain-launch requests, campaign shares, vesting vouchers and reward distribution.

Interchain Foundation — Jul 2022 — Dec 2022
Blockchain Engineer, Go — Cosmos Hub & Interoperability — Remote · in parallel with All in Bits

- Maintained and evolved Gaia, the Cosmos Hub application, implementing bug fixes, upgrades and ongoing improvements across the Go codebase.
- Built E2E and unit tests for vesting, fee grants, validator unjailing and governance/group-controlled interchain accounts; maintained test helpers and CI.

Hermez Network — Feb 2021 — Jun 2021
Blockchain / Layer-2 Engineer, Go — Remote

- Refactored transaction selection in Go for the Ethereum L2 rollup, adding atomic transaction support and unit tests.
- Built Go integration examples for Baby Jubjub wallet derivation, Ethereum account authorization, and L2 transaction signing, submission and tracking.
- Integrated Go services with Ethereum smart contracts via ABI to submit zk-SNARK proofs for rollup batches.

Energi — Apr 2020 — Feb 2021
Backend Engineer / Architecture — Remote

- Designed exchange architecture from scratch and built **Go APIs** for users, KYC, custodial wallets, deposits, withdrawals and multi-chain transaction tracking.
- Built SQL models, Kafka workers and TypeScript frontend components.
- Deployed AWS/GCP infrastructure using Kubernetes, Helm, Vault, Consul, Terraform and Ansible, with GitHub Actions delivery and **Prometheus/Grafana** monitoring.

Trust Wallet / Binance Aug 2019 — Apr 2020
Backend Lead, Go Remote

- Led Go backend work on blockatlas: multi-chain integrations, transaction parsing, indexing, staking and market-data APIs.
- Built the Go backend for a Binance crypto gift-card system, enabling token claims in Trust Wallet via QR codes and single-use redemption links.
- Implemented RPC batching and Prometheus HTTP metrics; operated and monitored full nodes supporting the multi-chain backend.

Mercado Bitcoin Mar 2018 — Aug 2019
Tech Lead — Backend & Mobile São Paulo

- At Mercado Bitcoin, I built Go and Python services for multi-chain transaction tracking and payload signing.
- The role also included hot, warm, and cold wallet scripts tied to the exchange ledger and matching systems.
- Led a seven-person mobile team and coordinated delivery across backend, iOS, Android and web engineering.

XP Inc. (XDEX) Dec 2017 — Mar 2018
Staff Engineer São Paulo

- Led the entire XDEX exchange engineering team as Staff Engineer, combining technical leadership with hands-on work across technical decisions, development and delivery.

Finchain / FlowBTC Sep 2017 — Nov 2017
Full-Stack Developer

- Built Ethereum smart contracts and an Angular frontend for dApps.

Earlier Roles

Neon Bank — Mobile Developer (React Native, Objective-C, Java) | Jan 2017 - Nov 2017

Miya — Co-Founder / CTO | Jan 2016 - Jan 2017

Pixon — Co-Founder / CTO | Jan 2014 - Jan 2017

Ice Juice Lemon — Mobile Developer / Team Lead | Jun 2013 - Jan 2014

IAI — Mobile Developer / Instructor | Jul 2012 - Jun 2013

Brandish Ad — iOS Developer | Nov 2011 - Jul 2012

PERSONAL PROJECTS

Build tdmcp and Ableton Mind (TypeScript/Python); docs: pantani.xyz/tdmcp/ and pantani.xyz/ableton-mind/.

Rust personal study: Sunscreen for Solana and stellar-forge for Stellar; no professional Rust experience.

SELECTED REPOSITORIES / EVIDENCE

ignite/cli · **ignite/network** · **tendermint/spn** · **atomone-hub/atomone** · **atomone-hub/atomone-sdk** · **cosmos/cosmos-sdk** · **cosmos/ibc-go** · **cosmos/gaia** · **allinbits/vaas** · **hermeznetwork/hermez-node** · **trustwallet/blockatlas**

TEACHING & TALKS

FIAP · Mar 2018–May 2022 — Taught Ethereum dApps with Angular, React and Solidity in MBA courses.

Go Blockchain · 2018–2019 — Taught Ethereum smart contract courses and gave talks on Android and IoT integration.

Let's Code · Sep 2016–Jul 2019 — Taught programming fundamentals and Java, plus blockchain and Ethereum smart contract development, at the school and in-company (including a well-known law firm).

Selected talks — Web3Family 2023, Barcelona — building Cosmos SDK chains and tooling with Ignite · AwesomWasm 2023, Berlin — Ignite stack workshop · ETH São Paulo 2021 — zk-SNARKs and Ethereum Layer 2.

LANGUAGES

Portuguese (Native) · **English** (Advanced) · **Spanish** (Advanced)

EDUCATION & CERTIFICATIONS

Education — **Universidade Presbiteriana Mackenzie** · Computer Science: six semesters completed. Electrical Engineering: eight semesters completed. Neither degree completed. São Paulo, Brazil.

Certifications — Data Science (Let's Code Academy, 2021, 48h) · Programming Blockchain (Jimmy Song, 2018, 16h) · Ethereum Blockchain Developer (Go Blockchain, 2017, 16h) · Smart Contracts in Ethereum Blockchain (FIAP, 2017, 8h) · Blockchain Development (Finchain / Blockchain Brazil, 2017, 16h)
